Kebu Plast Mastic Special
PRODUCT DATA SHEET

- cold applied mastic
- based on petrolatum
- Hollow space filling
- corrosion protection
- Quick and easy application

The **Kebu Plast Mastic Special** is a polystyrene ball containing filling compound based on petrolatum to fill in void risk areas, for example for wrapping valves and flanges with petrolatum tapes. It consists of industrial petrolatum, fillers and fibres.

The polystyrene balls in the **Kebu Plast Mastic Special** cause a lower density of the mass and thus more volume to fill cavities. Also, they make the compound easy to process at low temperatures.
It is suitable for the application in void risk areas like gorges, around screws, nuts as well as for gaps between flanges. Subsequent the **Kebu Plast Mastic Special** needs to be coated by a suitable petrolatum tape, like **Kebu Petro-Tape A303** with the required number of layers.

Application

The area to be coated must be dry and free of dust and grease. If necessary, dry the surface using a propane torch or use **Kebu Petro Primer**. There is no need to preheat the area. A surface cleanliness of St 2 according to 8501-1 is sufficient for this application. Take **Kebu Plast Mastic Special** from the packaging, kneading it by hand or with a spatula.

FORMS OF DELIVERY

Other dimensions on demand

	Packaging	Content [l]
Kebu Plast Mastic Special	Plastic bucket	5
		20

PROPERTIES

Property	Unit	Typical values
Colour	-	brown
Consistency	-	deformable
Congealing point	°C	> 60
Operating temperature	°C	≤ 30
Processing temperature	°C	5 - 30
Saponification number	mg KOH/g	max. 2
Density at 20°C	g/cm³	approx 0.54±0.03
